

This is a historical weather map of the United States, likely from the early 20th century, showing a low-pressure system (LOW) centered over the Gulf of Mexico. The map includes isobars (30.00, 29.90, 29.80) and isotherms (30.20, 30.10, 30.00). Major cities are labeled, and a storm track is indicated with arrows and numbers 4, 6, 7, and 8. A large 'LOW' is written in the center of the storm system.
