

# THE FIRST MAN & WOMAN IN SPACE

- 0. THE FIRST MAN & WOMAN IN SPACE Story Preface
- 1. WILBUR AND ORVILLE WRIGHT
- 2. AIRCRAFT CONTROL
- 3. LIFT AND DRAG
- 4. KITTY HAWK
- 5. THE FIRST FLIGHT
- 6. FLYER 3 and OTHER FAMOUS FLIGHTS
- 7. THE FIRST ROCKETS
- 8. EXPERIMENTAL PLANES
- 9. THE SOUND BARRIER
- 10. THE SPACE RACE

#### **11. THE FIRST MAN & WOMAN IN SPACE**

- 12. ALAN SHEPARD'S FLIGHT
- 13. JOHN GLENN'S ORBIT
- 14. DEATH IN THE COMMAND MODULE
- 15. TO THE MOON
- 16. APOLLO 11
- 17. APOLLO 13
- 18. THE SHUTTLE'S DESIGN FLAW

In this image we see the world's first man in space (Yuri Gagarin) and the world's first woman in space (Valentina Tereshkova). Both cosmonauts were from the Soviet Union. Photo by Roscosmos.

Everyone was anxious for people (not just satellites) to fly in space. Russia and the U.S. first sent up several monkeys (this link takes you to a photo of <u>Sam</u>). Experts needed to determine the effects of space travel on mammals. What, for example, was it like to be <u>weightless</u>? Some of the monkeys lived; others did not. (<u>Sam did</u>.)

Yuri Gagarin, a 27-year-old Russian, was the first person to fly in space. Although his flight on April 12, 1961 was only one orbit around the Earth, it was a huge accomplishment.

Gagarin flew in <u>Vostok</u> and followed specific <u>written procedures</u> for <u>launch</u>, orbit and descent. (Follow the link to view a copy of his original flight plan.) During training exercises for his flight, Gagarin wore a <u>pressure suit</u>. (Follow this link to see it.)

A <u>hero of the Soviet Union</u>, Gagarin was honored <u>after his flight</u> (the link takes you to historical film footage). He received the ultimate honor, at age 34, following his death in a plane crash: His ashes were buried inside the <u>Kremlin Wall</u>, in Red Square.

The Russians also sent the <u>first woman</u> into space (<u>Valentina Tereshkova</u>) and the first person to venture outside an orbiting space capsule (Aleksei Leonov).

Tethered to an airlock, Leonov "walked" <u>outside</u> his orbiting spacecraft on March 18, 1965. He almost died while doing it. His <u>space suit inflated</u> more than expected and Leonov became too large to re-enter the airlock. He had to vent some of the pressure in the suit in order to get back in.

With such an impressive string of firsts achieved by the Soviet team, it appeared they would, indeed, be first to reach the moon. But a race is never decided after the first lap.

The United States was getting positioned to catch up with, and then pass, the U.S.S.R.
