WHERE IS THE BULLET?

- 0. WHERE IS THE BULLET? Story Preface
- 1. CHARLES GUITEAU: ERSTWHILE LAWYER
- 2. PLOT TO KILL PRESIDENT GARFIELD
- 3. ASSASSINATION of PRESIDENT GARFIELD
- 4. WHERE IS THE BULLET?
- 5. DEATH OF PRESIDENT GARFIELD
- 6. MURDER TRIAL of CHARLES GUITEAU
- 7. GUITEAU: WAS HE INSANE?
- 8. GUITEAU'S SENTENCE: DEATH
- 9. EXECUTION BY HANGING

At first people thought the President would survive. Garfield's attending physicians, however, searched for Guiteau's bullet without using sterile conditions. These illustrations appeared in Frank Leslie's Illustrated Newspaper August 20, 1881. The Library of Congress provides details of these pictures:

"The attempted assassination of the president - the discovery of the location of the bullet by means of Professor Bell's induction-balance / from a sketch by William A. Skinkle; ABS.

New York - First celebration of President Garfield's recovery - the display of fireworks at Fort Greene, Brooklyn,

New Jersey - The seaside Sabbath-School assembly at Asbury Pak, August 2d-12th - the evening praise-service in the pavilion on the beach, August 7th / from a sketch by a staff artist." Click on the image for a better view.

The President's doctors did what they thought was right. The problem is, what the doctors thought was wrong.

Without using sterilization (which was a new concept in 1881), attending physicians probed the President's wound with unwashed fingers and unsterilized medical devices. First Dr. D.W. Bliss looked for the elusive bullet. Then the Surgeon General of the Army, followed by the Surgeon General of the Navy, unsuccessfully hunted for it. These, of course, were the days before X-rays allowed doctors to look inside a human body.

Even <u>Alexander Graham Bell</u> (who had <u>invented</u> the "<u>photophone</u>" in 1880) was summoned to find the missing bullet. Using his new metal-detecting device, Bell <u>hooked up</u> his gadget to the President. At first everyone thought Bell had successfully located the slug. But when surgeons operated on the President, they STILL did not locate the bullet. Only then did anyone realize the great inventor had <u>actually detected</u> the metal mattress coils of the President's bed. <u>The bullet</u>, lodged near Garfield's vertebrae, was never found while the President was

After all the unsterilized probing of the President's body, including at least one nick of his liver, Garfield developed a massive infection. Blood poisoning, perhaps from the bullet, complicated his condition. After 2½ months of anguished suffering, James Garfield died at 10:30 p.m. on 19 September 1881.

Chester Arthur was sworn in as President. And Charles Jules Guiteau would now be tried for capital murder.
