

In ITV's "Downton Abbey," Rose begs her "Cousin Robert" (Lord Grantham) for a wireless. Firmly established in tradition, and the "old ways," Robert Crawley sees no need for a wireless.

Until ... he learns that the King is giving a speech which will be broadcast for all to hear. For all, that is, who have a wireless.

Who was the King giving the speech which convinced Lord Grantham to give-in and buy a wireless? $\underline{\text{George V}}$, the current Queen's Grandfather.

What was the speech? The King opened the "British Empire Exhibition," based <u>at Wembley</u> (in London). The image, depicted at the top of the page, is one of the posters advertising the very-popular event (which ran from April to October in 1924).

When did King George V give the opening speech? On April 23, 1924. (This helps us fix the time frame for

Downton Abbey's Season Five, Episode Three).

What did the King say, causing Violet Crawley(the Dowager Countess of Grantham, Lord Grantham's mother) to rise to her feet? Among other things, these words (which <u>we can still hear today</u>):

I declare this Exhibition open.

The broadcast—which the people at Downton Abbey (seen here, in a photo by Nick Briggs/Carnival Film & Television Limited, for Masterpiece) heard—was not a "live" broadcast. At this stage of the developing technology, "live radio" was still in the future.

So how were the King's words transmitted? The BBC recorded the speech on April 23rd, then broadcast it later that evening:

...This British Broadcasting Company broadcast was recorded by the acoustic method -- a loudspeaker was placed before an old-fashioned recording horn -- by the Gramophone Company of London, and rush-processed into finished shellac records for a repeat broadcast in the evening.

A substantial portion of the broadcast was recorded for possible commercial release on the HMV label, but only the King's speech is currently confirmed to exist. (See "Documenting Early Radio - A Review of Existing Pre-1932 Radio Recordings," by Elizabeth McLeod.)

The BBC, which aired the King's words via the wireless, tells us that the speech was historically important for several reasons:

This was the first broadcast made by King George V, although more were to follow. An estimated 10 million people heard the transmission and many events around the country were suspended so that the public could listen.

As it was so high-profile, early royal broadcasting may have altered the image of the monarchy. This was also, possibly, the first electronic recording made in England.

In-text image, from the Shorpy Archive, depicts a wireless, circa 1924: "Brent Daniel, formerly of the Radio Laboratory of the Bureau of Standards at Washington, with the first portable Super-Heterodyne, his own design. The seven vacuum tubes, batteries, loop antenna, loudspeaker and other necessary units are completely self-contained in the carrying case. He has been able to hear Pacific Coast stations from this outfit."
